

Task 5

Your local area such as playing fields, garden or even just on a tree can be a great place to see some wildlife. We will be studying biodiversity, ecosystems and classification during your time as an A-level Biologist so this is a chance to explore the biology in world you see every day.

To do: photograph at least 5 distinct species!

For each of these species, do some research and see what interesting information you can find, for example associations with other species (pollinators, predators...), reproduction, behaviour, physiology, biochemistry...

Here are some examples I found looking in my garden.
